

MPM-1 - Magnetic field meter

The meter measures the static magnetic field strength, the alternative magnetic field amplitude, and the amplitude of single magnetic field pulse. The two measuring range are available and zero level can be adjusted. Analog memory of pulse amplitude allows reading of magnetic field pulses. Reduced dimensions and battery alimentation make this meter particularly suitable for in the field measurements of magnetic field distribution as well as for control of magnetization process for magnetic particle defectoscopy . The meter operates in both static and alternative magnetic field, as well as in the pulse mode.
